FOREWORD

This report draws together in tabular form information on working conditions of employees in most Canadian industries. The information presented is secured from the Survey of Working Conditions conducted in April of each year by the Economics and Research Branch of the Department of Labour.

These surveys secure information on conditions of employment in manufacturing, mining, public utilities, transportation and communication, trade, finance and service. Employers in these industrial groups are asked to report on the practice in their establishments regarding standard hours of work, vacations with pay, statutory holidays, overtime provisions, pension and group hospital-medical plans, and other conditions of employment.

The report was prepared by the Working Conditions and Social Analysis Section of the Economics and Research Branch, Department of Labour. Much of the credit for its production must be given to approximately 12,000 employers who co-operated in completing the survey questionnaire. To them we express our appreciation.

W. R. Dymond,
Director,
Economics and Research Branch,
Department of Labour.

TECHNICAL NOTES

The term "working conditions", as used in the present survey, designates those conditions of employment other than wages or salaries which enter into the contracts, formal or informal, between workers and their employers in a given plant, office or undertaking. It does not refer to the physical conditions of the work place, such as ventilation, light, heat, work space or sanitation. The survey does not attempt to cover all items of working conditions each year. Those items such as hours of work, paid statutory holidays, and vacations, which together with rates of remuneration are important aspects of a worker's take home earnings, are dealt with each year; other items are dealt with less frequently, depending upon their current importance in labour management relations.

Coverage and Scope of Survey:

The survey of working conditions is conducted by means of a mailed questionnaire sent out as of April 1 each year to some 13,500 individual business establishments in Canada. Most of these establishments employ more than 15 workers, and this report is based on returns covering about one and three quarter million workers in manufacturing, mining, public utilities, transportation, communication, trade, finance and insurance, and service.

Concepts and Definitions:

Employers are asked to submit separate reports for each of their "establishments". By "establishment" is meant an operating unit having an independent existence in the sense that it contains within itself all of the elements needed for the activities carried on. Thus, the establishment is, typically, a factory, mine, store or similar unit; while in most cases it is a separate firm, it should be noted that the term "establishment" is not necessarily synonymous with "firm" or "company". In some cases it is necessary for an employer to group information for two or more of his operating units on one survey return; in other cases it is necessary to complete separate returns for individual departments of his undertaking, although each may not be a separate entity in the usually accepted sense. For the sake of uniformity, therefore, the term "reporting unit" is used throughout this report.

Reporting units are classified in accordance with the industrial descriptions contained in Standard Industrial Classification Manual, issued by the Dominion Bureau of Statistics. Since some firms manufacture a variety of products or provide services of different kinds, there are cases where certain of the establishments of such firms are placed in different industrial classifications. Each reporting unit is requested to indicate on the questionnaire its specific activity or activities in order of importance by value of product or service. The whole unit is then classified according to the activity listed first.

For most items on the questionnaire, employers participating in the survey are asked to report separately for non-office and office workers. The term "non-office" is meant to include production, maintenance, technical and custodial workers. Non-office employees in manufacturing are referred to as plant workers.

Clerical, administrative and professional workers are classed as office workers. In a few industries the division of employees differs somewhat. In retail trade, for instance, the groups are "sales", "office" and "other" employees, and in certain of the transportation groups, employers are asked to report separately for "operating", "office" and "other". Operating employees include drivers, crews, etc., while terminal employees, maintenance workers, warehouse men, etc., are classified under "other".

Compilation Procedure:

Returns are edited for errors and inconsistencies; the replies which they contain are then punched on mechanical tabulation cards. Information in regard to the various items, classified by industry and/or geographical area, is then compiled by means of mechanical data processing machines.

Tabular Presentation:

The tables in this report are in the form of frequency distributions of employees according to the conditions reported by the reporting units in which they are employed. In tables 1 and 2 distributions of reporting units are also given; these tables also contain comparable figures for 1957, whereas the remaining tables deal with 1958 only.

Those who use this report should note that respondents to the survey questionnaire, are requested to report on working conditions as these apply to the majority of their employees, in each of the classes enumerated above. For this reason it cannot be deduced, for instance, from Table 1 that 67.5 per cent of the non-office employees in manufacturing in Canada as covered by the 1958 survey, work a standard schedule of 40 hours per week. It could be said however, that 67.5 per cent *are in establishments in which the 40 hour week is the standard schedule for the majority of non-office employees*. Similarly, in Table 1, 69.3 per cent of the total are in plants reporting pension plans for non-office employees; this does not necessarily mean that this percentage of employees is covered by such plans.

For manufacturing, the largest industrial group covered by the survey, distributions are given for both non-office and office employees by province and by its 17 major sub-divisions. An additional industrial distribution of the figures for non-office employees is given in Table 5. In this table, the columns with italicized headings contain information for selected smaller sub-divisions of manufacturing. These sub-divisions are shown immediately to the right of the major group of which they form a part.

Confidential Nature of Survey:

Information received by the Department from respondents to the Survey of Working Conditions is given on a confidential basis, and is used only for the compilations of statistical aggregates; care is exercised to avoid revealing the identity of any individual respondent. Finer distributions of the information contained in the report, as well as information on industries not shown herein are available on request, subject to the limitations required to protect the confidential replies of participating employers.
